# Relearning EasyStart – 368

1. **Remove the cover and find the jumper (JP1)** Please note that you will need to move the black start capacitor slightly to fully expose the jumper pins.
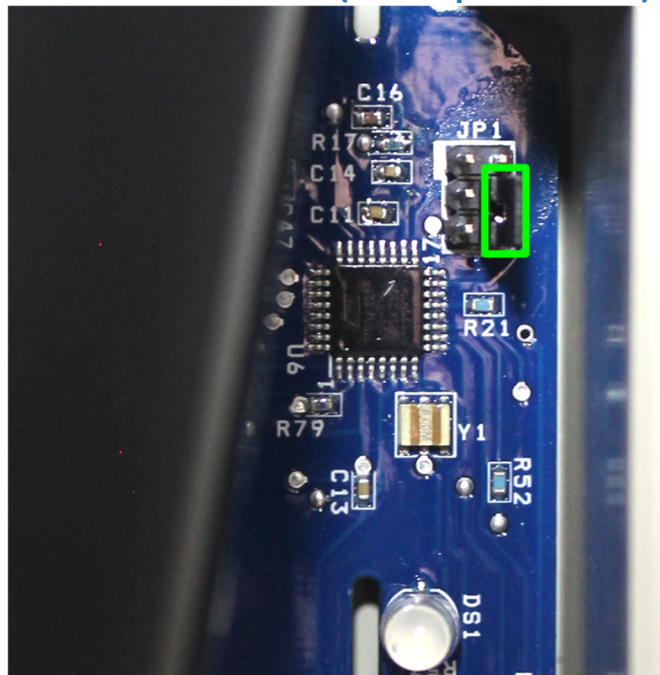

Rev 1.00
NOTE: Power should always be turned off
when working with electrical components

2. **Move the jumper block from the Factory Default to the Relearn position as shown in the below examples.** We recommend using a pair of needle nose plyers or tweezers.

3. **Apply power to EasyStart and start the compressor. Run it for 10 seconds then turn power off.**

Factory Default (across pins 3 and 4)   Relearn Position (across pins 4 and 6)

4. **Move the jumper block back to the factory position. (across pins 3 and 4).** Put the cover back on and do four more starts. Learning is finished.
