

DDC Easy Start Wiring

NOTES: Disconnect the wires and components with the yellow x's. The DDC circuit board is not touched during Easy Start installation.

1-Connect the Easy Start Black wire on the start relay **#5** position with the other two existing black wires.

2-Connect the Easy Start Orange wire on the run capacitor blue wire herm post.

3-Remove the compressor run red wire from the run capacitor and splice it into the Easy Start Brown wire.

4-Where you just removed the red wire in step 3, connect the Easy Start White wire.
